Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Response to Amendment

Note, the Amendment to the Claims describes both "Claims 1-30 (canceled)" and "Claim 30 (currently amended)". Examiner's review reveals only 1-29 were earlier filed.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 30-34 are rejected under 35 U.S.C. 103(a) as obvious over USPN 5,897,797 to Drouillard et al in view of USPN 5,932,119 to Kaplan et al. Drouillard et al describes laser marking. Drouillard et al describe marking produce and patent citation 4,839,181 listed on the front page of Drouillard et al describes use of a laser with a meat product. Drouillard et al describe (column 10, lines 25-39) use of sensors to determine the size of the workpiece, but do not describe sensing weight of the workpiece. Kaplan et al describe laser marking systems with selectable beam intensity, sensing means, and program control. Kaplan et al describe (column 17, lines 61+) use of weight for determining characteristics of the workpiece. The use of a workpiece weight sensor in Drouillard et al would have been obvious at the time applicant's invention was made to a person having ordinary skill in the art because it automates old manual sensing and measuring of workpiece data. The intended use with a particular workpiece, such as a particular meat, does not impart patentability to the apparatus claims. The intended use

with laser application of particular mark features of logotype, product origin, and expiration date does not impart patentability to the apparatus claims.

Response to Arguments

Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.
